EXTRACT DATA FROM ANY DOCUMENT

INTAKE/TRIAGE HYPERAUTOMATION

Data is everywhere. It drives modern business. But when 80% of all business data is trapped in unstructured formats, it complicates things. For your businesses to work, you must understand what your data is telling you.

Most likely you struggle to deal with the enormous volume of documents and content that enter your processes via business partners, suppliers, and customers. Such content is often semi-structured or unstructured, in different formats, layouts, and languages, and creates tremendous complexity that makes you waste vast human resources to handle.

Until recently, the ability to extract useful data and insights from such content was reserved to human intelligence and highly complex tools that took months to setup and required highly skilled technical users.

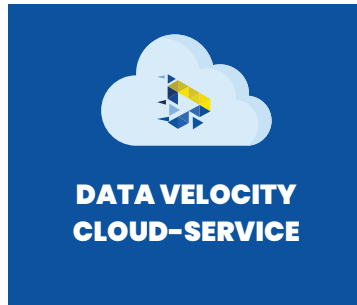

Turn Unstructured Data Into Actionable Information

With the advancements of AI and machine learning we can train AI to process content as humans would: by identifying many variations of a document, locating and extracting data, understanding intent, and delivering it to core systems to trigger business processes.

- Automatically extract data from application forms, KYC documents, and questionnaires.
- Automatically extract Member, Provider, ICD, and CPT data from Pre-Authorizations
- Automatically extract member data, determine type, objects, services and dates from Claims, Appeals, and Grievances
- Automatically extract member data and determine intention and sentiment from emails

HOW IT WORKS

Specify and extract information from content using AI – Natural Language Processing without worrying about data structure, document format, or filetype; or whether it is typed or handwritten.

Provide content like Intake Forms, KYC, Pre-Auths, Claims, Doctors Notes, and Health Records from any channel

Receive extracted key-value pairs and tables for immediate action

BENEFITS

You can generate significant value during the transition to a fully digital future by optimizing the way in which you process intake content. Its data is crucial to your service offerings and daily operations.

Automate the repetitive, slow, tedious, and error-prone job of manual document processing

Enable omni-channel end-to-end digital processing and utilize all available data

Improve data quality and data structure for other efforts like RPA and Analytics

Improve security and compliance through robust data privacy, encryption, and security controls
